St. Joseph's Hospital Water Line

In May the Water & Sewer Division of the Public Works Department started the task of extending water service to the site of the new St. Joseph's Hospital. This project was quite a large undertaking that included laying a new 10" main, nearly 4,300 feet long including the installation of 10 new fire hydrant. This project progressed quickly and is nearly complete. We are currently waiting on the contractor who is installing the sewer lines to finish their work so we can move back in to complete setting the final hydrants. Once all the hydrants are in place the line will be ready for testing.

May 16—W&S personnel and a contractor from Schulte Supply make the ten on ten "hot tap". A hot tap is made by placing a valve to connect the old 10" line to the new 10" line. This work is done with the existing line still under pressure. Once the new line is finished, this valve can be opened so that tests can be made and then shut again until samples have passed and the IEPA issues a permit for the line to be put into service.

May 30—The Water & Sewer crew are installing lengths of pipe for the line. They installed 200 pipes, each 20 feet in length for this project.
